

# Closing a Window on KeyEvent in Java

```
Toolkit.getDefaultToolkit().getSystemEventQueue().push(new EventQueue() {  
    @Override  
    protected void dispatchEvent(AWTEvent event) {  
        if (event instanceof KeyEvent) {  
            KeyEvent keyEvent = (KeyEvent) event;  
            if (KeyEvent.KEY_RELEASED == keyEvent.getID() &&  
                (KeyEvent.VK_ESCAPE == keyEvent.getKeyCode() ||  
                 (KeyEvent.VK_F4 == keyEvent.getKeyCode() && keyEvent.isAltDown() ))) {  
                int conf = JOptionPane.showConfirmDialog(f,  
                    "Soll die Anwendung wirklich beendet werden?", "Beenden", JOptionPane.  
                    YES_NO_OPTION, JOptionPane.QUESTION_MESSAGE, icon);  
                if(conf==0){  
                    System.exit(0);  
                }  
            }  
            super.dispatchEvent(event);  
        }  
    }  
});
```
