

Mit Java die Rückgabe einer URL als String einlesen

```
public static ArrayList<String> getStringFromInternet(URL url){
    ArrayList<String> list = new ArrayList<String>;
    try {
        URLConnection yc = url.openConnection();
        BufferedReader stream = new BufferedReader(new InputStreamReader(yc.
getInputStream()));
        while ((inputLine = stream.readLine()) != null) {
            list.add(inputLine);
        }
        stream.close();
        return list;
    }catch (Exception exception) {
        ex = exception;
        return false;
    }
}
```
