

JavaScript and KeyEvents

```
<script type="text/javascript">
document.onkeyup = KeyCheck;
function KeyCheck(e){
    var KeyID = (window.event) ? event.keyCode : e.keyCode;
    switch(KeyID){
        case 16:
            //Shift;
            break;
        case 17:
            //"Ctrl";
            break;
        case 18:
            //"Alt";
            break;
        case 19:
            //"Pause";
            break;
        case 37:
            //"Arrow Left";
            //Virtual click on a Link
            windowlocation=document.getElementById('prevdaylink').href;
            break;
        case 38:
            //"Arrow Up";
            break;
        case 39:
            //"Arrow Right";
            //Virtual click on a Link
            windowlocation=document.getElementById('nextdaylink').href;
            break;
        case 40:
            //"Arrow Down";
            break;
    }
}
</script>
```
