

# Closing a Window on KeyEvent in Java

```
Toolkit.getDefaultToolkit().getSystemEventQueue().push(new EventQueue() {
    @Override protected void dispatchEvent(AWTEvent event) {
        if (event instanceof KeyEvent) {
            KeyEvent keyEvent = (KeyEvent) event;
            if (KeyEvent.KEY_RELEASED == keyEvent.getID() &&
                (KeyEvent.VK_ESCAPE == keyEvent.getKeyCode() ||
                 KeyEvent.VK_F4 == keyEvent.getKeyCode() && keyEvent.isAltDown() )) {
                int conf = JOptionPane.showConfirmDialog(f,
                    "Soll die Anwendung wirklich beendet werden?", "Beenden", JOptionPane.
                    YES_NO_OPTION, JOptionPane.QUESTION_MESSAGE, icon);
                    if (conf == 0) {
                        System.exit(0);
                    }
                }
            super.dispatchEvent(event);
        }
    }
});
```
