

Standard-Connection

```
<?php
$host="localhost";
$user="";
$password="";
$db="";
$verbindung = mysql_connect ($host,$user, $password) or die (
"keine Verbindung zur Datenbank moeglich.");
mysql_select_db($db) or die ("Die Datenbank existiert nicht.");
?>
```

Query-Function

```
<?php
//ich zähle gerne die abfragen
$db_queries=0;
function db_query($query){
global $db_queries, $db_conn;
$result=mysql_query($query);
$db_queries++;
if(mysql_error()){
echo "<b>".$query."</b><br>\n".mysql_error();
$result=null;
}
return $result;
}
?>
```

Connection als Klasse

```
require_once( 'MysqlConnector.php' );
$mysqlConnector = new MysqlConnector();
$mysqlConnector->PushData($server, $database, $username, $password);
$mysqlConnector->Open();
$result=$mysqlConnector->Query(
"SELECT * FROM Tabellenname WHERE irgendwas IS NULL;" );
$mysqlConnector->Close();
```

MysqlConnector.php

```
<?php
class
```

```
