

Eine PHP-Funktion die vertikal einen Text schreibt, da dies noch nicht von css unterstützt wird

```
/*
 * @name printverticalDate
 * @desc This function writes a vertical timestamp
 * @param $today timestamp reflects the required time
 * $return null*/
function printverticalDate($today,$width=20,$height=250){
global $day,$mon; //Arrays die Tag und Monatsnamen beinhalten
//create the Image
$im = imagecreatetruecolor($width, $height);
// reset the alphablending
imagealphablending($im, false);
// save the alphavalue
imagesavealpha($im, true);
// Create colors
$trans = imagecolorallocatealpha($im, 255, 255, 255, 127);
//transparent color
$gray = imagecolorallocate($im, 100, 100, 100); //font color
// Draw transparent background
imagefilledrectangle($im, 0, 0, 19, 249, $trans);
// Set the alphablending to true
imagealphablending($im, true);
// Write the text
imagettftext($im, 11, 90, 16, 240, $gray, 'f/arial.ttf', $day[ date("N",
$today) ].", der ".date("d",$today).".". $mon[ date("n",$today) ]." ".date(
"Y",$today));
//Output PNG
header( "Content-type: image/png" );
//Destroy Image-Handle
imagepng($im);
imagedestroy($im);
}
```
